June 27th ~ Monday Morning Minutes:

Let us take some time to answer YOUR questions...

We received a great deal of questions from last week's Monday Morning Minutes on the Bell and Gossett Ecocirc domestic water inline pump. Two of the most asked questions were; Why is more reliable? And How does it save energy?

The ECO^{CIRC} is more reliable because there are less moving parts. Here is a brief description.

Comparison: Spherical Motor vs. Canned Motor

Key Advantages

- Simplicity – just one high precision part
- No shaft, no bearing bushings
- Self-aligning rotor
- Long term quiet and trouble free operation
- No start-up problems
- ECM motor technology provides greater efficiency

How does it save energy? It uses ECM motor technology! More on that next week.
