Temperature Engineering  
Brighton, MI  
Bob Gaines

### Owner

**Telluride Association**  
[tellurideassociation.org](http://tellurideassociation.org)  
Michelle Wogaman

### The RLD Project Team

Dan Ondersma  
Chris Lieder

## Challenge

In April of 1960, Deppmann sold two Bell and Gossett U4 Universal pumps for installation in the current Telluride Association – Telluride House. A few decades ago, Temperature Engineering Corporation replaced the bearing assemblies and the couplers. However, the time had come to replace the pumps and it was important to select the right replacement model.

## Why R.L. Deppmann?

Bell and Gossett pumps are known for their longevity and maintenance friendly nature. Temperature Engineering trusted the **R.L. Deppmann Customer Service Team** and called Dan Ondersma, Senior Customer Service Representative, to cross reference the pumps and provide the appropriate replacement product. Michelle Wogaman from **Telluride Association** expressed her thankfulness for the contractor and the pump brand that gave them so many years of quality service.

## Solution

We provided two new Bell & Gossett 1510 pumps, laser aligned and built with the same quality and in the same USA plant in Morton Grove, IL. As the new pumps left the dock, our warehouse staff bid them a fond farewell...See you in 56 years!

"We know from many years of experience with R L Deppmann and B&G pumps that once our project is complete, the last thing we have to worry about is a pump performance or any other pump issue for that matter."

- Robert Gaines, Temperature Engineering
